

Electrathon America's

Now in it's twentieth year, Electrathon America (EA) is revving up for its first NATIONAL CHAMPION RACE! Electrathon vehicles are sleek, single seat, fully electric vehicles designed and built by high school students, college students, and hobbyists. More than 100 Electrathon design teams from schools around the U.S. are expected to compete in this three day Championship Event, happening December, 2013, Disney's Coronado Springs Resort, in Orlando, Florida.

In addition to the Electrathon National Championship race, EA will be joined by its STEM (science, tech, engineering, math) partners to bring attendees of all ages a multitude of hands on learning experiences, from building their own solar sprint racers with the help of the Florida Solar Energy Center, to designing robot drag racers from NXT Robotic Kits.

The vision of EA is to contribute to laying a foundation for a green, vibrant, low carbon future full of possibilities and opportunities for the people of today, and the children of tomorrow.

Electrathon America's inaugural National Champion Race, and associated GREEN STEM MIDWAY/GREEN SPEED ZONE and PIT (Petroleum Independent Transportation) events are happening as part of the RPM International Motorsports and Trade Expo, an all encompassing, mega event of transportation innovation. RPM is designed to engage, entertain and excite enthusiasts of all kinds with expos and hand on events revolving around motor sports, the history and the future of technology, and the ultimate transportation experiences in air, on land, at sea, and in space.

Electrathon America Foundation is a 501(c)3 Organization (pending).
